Sr SQL Engineer, Concurrency

SQL
intersection

Reminder: Intersect with Speakers and Attendees

- **Tweet tips and tricks that you learn and follow tweets posted by your peers!**
 - Follow: #SQLIntersection and/or #DEVIntersection
- **Join us – Thursday Evening – for SQLafterDark**
 - Doors open at 7:30 pm
 - Trivia game starts at 8:00 pm
 - Winning team receives something fun!*
 - Raffle at the end of the night
 - Lots of great items to win including a seat in a SQLskills Immersion Event!*
 - The first round of drinks is sponsored by SQL Sentry and SQLskills

Abstract

Your company is storing and using more data every day. And, every day, more of that is being stored using SQL Server and SQL Database in Azure. In this session, I'll help you understand what options are available for SQL in Azure and what you need to know to develop for them. I'll focus on the T-SQL that is (and isn't) supported, query tuning, and indexing. You'll leave this session with the right tools to write effective queries for SQL Server and SQL Database in Azure.

Azure basics

Secure cross-premises connectivity

- **Point-to-site VPN**
 - Configured on *each* client
 - Doesn't require a compatible VPN device
 - Doesn't require an internet-facing IPv4 IP address
- **Site-to-site VPN**
 - Configure compatible VPN device with Azure VPN Gateway
 - VPN device must have an Internet-facing IPv4 IP address
- **Express Route**
 - "More reliability, faster speeds, lower latencies and higher security"
 - More money
 - Limited locations and service providers
- **Channel 9: Azure Network Infrastructure** <https://channel9.msdn.com/Blogs/Azure-and-the-Modern-Data-Center/Azure-Network-Infrastructure>

Networking Inside Azure

- **Virtual Networks (VNets)**

- VNets are isolated from each other. Want them to talk? Set up a VPN.
 - VNet peering is in preview
- ...but VMs in the same VNet can communicate on private IPs.

- **Can divide into subnets**

- **Can put behind load balancer**

- **Set up a VNet before any VMs or services**

- **MVA: Azure Networking Fundamentals for IT Pros**

https://mva.microsoft.com/en-US/training-courses/azure-networking-fundamentals-for-it-pros-8917?l=R70kv0B3_6104984382

What are you paying for?

- **Network (VPN Gateways, Public IP Address, Express Route)**
- **Compute (VMs)**
- **Licensing (SQL Server)**
- **Storage (disks)**
- **Throughput (SQL Database)**
- **Automation**
- **Data Out**

Management

■ Portal

- ❑ Classic Portal (manage.windowsazure.com)
- ❑ Portal (portal.azure.com)
- ❑ You can't manage all features from either one: <https://azure.microsoft.com/en-us/features/azure-portal/availability/>

■ PowerShell

- ❑ Learn it and **love** it
- ❑ Download and install <https://azure.microsoft.com/en-us/documentation/articles/powershell-install-configure/>
- ❑ Cmdlet Reference <https://msdn.microsoft.com/en-us/library/azure/dn708514.aspx>

What options are available for SQL in Azure?

The Azure Periodic Table

Explore the power and possibilities of Azure

<http://www.concurrency.com/landing/azure-periodic-table>

Explore the power and possibilities of Azure															AZURE IOT HUB
http://www.concurrency.com/landing/azure-periodic-table															EVENT HUBS
SECURITY CENTER	LINUX HUB	VIRTUAL MACHINES							AZURE AD B2C	AZURE AD	AZURE AD DC	MULTI-FACTOR

IaaS

- **SQL Server licensing**

- Bring your own licensing (BYOL)
 - Use a Windows VM image, install SQL Server with your license key, pay for compute costs
- Image
 - Use a SQL Server VM image, pay compute & SQL Server costs
 - All features are installed – every last one!
 - SQL Server 2008R2, 2012, 2014, 2016
- BYOL image
 - Enter your key within 10 days
 - All features are installed

- **No “development” or “test” tier**

- Can use Express and Developer editions
- Use Azure Dev Test Labs

Compute costs

Tier/size	Cores	RAM	Disk Size	Price
Standard A2	2	3.5 GB	135 GB	\$0.18/hr
Standard A7	8	56 GB	605 GB	\$1.20/hr
Optimized D2	2	7 GB	100 GB	\$0.26/hr
Optimized D13	8	56 GB	400 GB	\$1.08/hr

SQL Server costs

Tier/size	Web	Standard	Enterprise
Standard A2	\$0.032/hr	\$0.40/hr	\$1.50/hr
Standard A7	\$0.064/hr	\$0.80/hr	\$3.00/hr
Optimized D2	\$0.032/hr	\$0.40/hr	\$1.50/hr
Optimized D13	\$0.064/hr	\$0.80/hr	\$3.00/hr

* Pricing current as of October 10, 2016; East US 2 region

PaaS

- **SQL Database**
 - Single database
 - Elastic pools
- **Database only – no Analysis Services, Integration Services, or Reporting Services**
 - SQL Data Warehouse (GA as of July 13, 2016)
 - Data Factory
 - Power BI

Single database

Tier/Size	DTUs	Max storage (per DB)	Price
Basic B	5	2 GB	\$5/mo
Standard S1	20	250 GB	\$30/mo
Premium P1	125	500 GB	\$465/mo
Premium P11	1,750	1 TB	\$7,001/mo

Elastic pool

Tier/DTUs	Max DBs (per pool)	Max storage (per pool)	Max eDTUs (per DB)	Price
Basic 100	200	10 GB	5	\$149/mo
Standard 100	200	100 GB	100	\$223/mo
Standard 1200	400	1.2 TB	100	\$2,701/mo
Premium 1500	50	750 GB	1,000	\$8,370/mo

* Pricing current as of October 10, 2016; East US 2 region

IaaS

- Need to rapidly move existing database into Azure
- Databases larger than 1 TB
- Predictable, steady workloads
- DR for on-premises SQL Server instances

PaaS

- New cloud-designed apps
- Apps that need built-in HA and DR
- Variable workloads and usage patterns
- Scale-out
- SaaS / single-tenant databases

IaaS: SQL Server on VM

Connectivity

- **Connect applications to the new server**
 - In the same Vnet? Specify server name and integrated security in the connection string.
 - Over the internet?
 - Open TCP ports in Windows Firewall
 - Configure SQL Server to listen on TCP
 - Configure mixed mode authentication
 - Configure a Network Security Group inbound rule for port 1433
 - Configure DNS name
 - Verify connectivity
- **Resource: Connect to a SQL Server Virtual Machine on Azure (Resource Manager)**
<https://azure.microsoft.com/en-us/documentation/articles/virtual-machines-sql-server-connectivity-resource-manager/>

Moving data into the database

- **Back up to and restore from URL**
- **Deploy a SQL Server Database to a Microsoft Azure VM wizard**
 - Built into SSMS
- **SQL Server Database Migration wizard**
 - CodePlex download
- **RLDB – Really Large Databases – Import/Export Service**
 - Ship a drive to a data center and have them put it in

Changing VM size

- Can upgrade or downgrade
- It IS an online operation!
- How long does it take? It depends.
- Done through Portal or PowerShell

Stopping the VM - when do you get charged?

- “If the status says **“Stopped (Deallocated),”** you’re not being billed. If it says “Stopped Allocated,” you’re still being billed for allocated virtual cores (not the software license itself).”
- “To ensure you’re not being billed, always stop virtual machines from the management portal. You can also stop the VM through PowerShell by calling ShutdownRoleOperation with "PostShutdownAction" equal to "StoppedDeallocated".
If you shut down a VM from inside (using Windows power options) or through PowerShell by calling ShutdownRoleOperation with "PostShutdownAction" equal to "Stopped".”
- <https://azure.microsoft.com/en-us/pricing/details/virtual-machines/>

That is only for compute!

- You still pay for storage
- You still pay for network
- If you have multiple VMs in a cluster or an AG, and you don't shut all of them down, you pay for those still running

What features & T-SQL are supported?

- **Everything**

Tools for development

- **Same as you've always used!**

- You'll need a public IP address, a point-to-site VPN, or a site-to-site VPN to connect

- **SSMS**

- I recommend the standalone, updated-monthly SSMS
 - <https://msdn.microsoft.com/en-us/library/mt238290.aspx>

- **Visual Studio**

- I recommend Visual Studio Community 2015
 - <https://www.visualstudio.com/en-us/products/visual-studio-community-vs.aspx>

Biggest pain points

- **Network**

- Is the pipe from users -> application -> database enough to provide adequate performance?

- **Performance**

- Is the virtual machine sized properly to handle load?

- **Security**

- Is everything set up correctly to allow the right users the right access?

PaaS: SQL Database

Pricing & Performance

Tiers

- **Based on DTUs - Database Throughput Units**

- "How many transactions could be completed per second under fully loaded conditions"
- Combo of CPU, memory, reads, writes
- Benchmark: <https://azure.microsoft.com/en-us/documentation/articles/sql-database-benchmark-overview/>

- **How do I translate an existing SQL Server workload to a SQL Database?**

- DTU calculator: <http://dtucalculator.azurewebsites.net/>

Differences between SQL Server and SQL Database

Partially supported

- **CREATE/ALTER DATABASE**
- **CREATE/ALTER USER**
- **CREATE/ALTER LOGIN**
- **CREATE/ALTER PROCEDURE**
- **CREATE/ALTER FUNCTION**
- **CREATE/ALTER TABLE**
- **CREATE/ALTER VIEW**
- **CREATE TYPE**
- **KILL**

Not supported

- **Cross-database queries (natively)**
- **Linked servers, OPENQUERY, OPENROWSET, etc**
- **Database Mail**
- **SQL Server Agent**
- **Replication (can be subscriber, but not publisher)**
- **Change Data Capture**
- **Data Collector**
- **FILESTREAM**
- **Resource Governor**
- **Service Broker**
- **Profiler/trace**
- **..and more**

<https://azure.microsoft.com/en-us/documentation/articles/sql-database-transact-sql-information/>

Methods for migrating

- Deploy Database to Microsoft Azure Database Wizard
- BACPAC export & import
- Transactional replication
- Reference: SQL Server database migration to SQL Database in the cloud <https://azure.microsoft.com/en-us/documentation/articles/sql-database-cloud-migrate/>

Tools for development

- **SSMS**

- I recommend the standalone, updated-monthly SSMS
 - <https://msdn.microsoft.com/en-us/library/mt238290.aspx>

- **Visual Studio**

- I recommend Visual Studio Community 2015
 - <https://www.visualstudio.com/en-us/products/visual-studio-community-vs.aspx>

Tools for tuning

- **Wait statistics**
- **Extended Events**
- **Plan cache**
- **Query Store**
- **Query Performance Insight**
- **SQL Database Advisor**

Wait statistics

- “What resource(s) is my database waiting on?”
- `sys.dm_os_wait_stats` is valid, but won't return helpful information
- Use `sys.dm_db_wait_stats` instead
- Current since database was created, moved, or taken offline
- Capture on a regular basis and store in a table for later querying

Extended Events

- **Capture detailed information about events in real-time**
 - 125 events exposed
 - Database-level only, not server-level
- **Memory- and disk-based targets to view and store data**
- **View the sessions using SSMS (not VS)**

Plan cache and Query Store

- Use the same DMVs to access plan cache data as you would in SQL Server instances
- View and save the execution plan XML
- Enable Query Store to save historical information about query execution
- Use Query Performance Insight to view the information and make decisions about it

Query Performance Insight

- **Requires Query Store be enabled**
- **Review top resource-consuming queries**
 - CPU
 - Duration
 - Number of executions
- **Select a query to view its details**
- **Check recommendations in SQL Database Advisor (on the Portal)**

SQL Database Advisor

- **Create Index recommendations**
 - Non-clustered only
- **Drop Index recommendations**
 - Detects duplicates
- **Schema issues**
 - Invalid column name, invalid object name, couldn't find stored procedure, etc
- **When queries can benefit from parameterization**
 - Enables forced parameterization

Come to the cloud!

IaaS

- Need to rapidly move existing database into Azure
- Databases larger than 1 TB
- Predictable, steady workloads
- DR for on-premises SQL Server instances

PaaS

- New cloud-designed apps
- Apps that need built-in HA and DR
- Variable workloads and usage patterns
- Scale-out
- SaaS / single-tenant databases

We're back in Orlando!

Leave the every day behind and enter a world of wonder and enchantment at the Walt Disney World® Resort. Located in the heart of the most magical place on earth, the Walt Disney World Swan and Dolphin Resort provides a truly extraordinary backdrop for our event! Beautiful tropical landscaping, tranquil waterways and classic art and architecture work together to create a stunning landmark!
