IaaS

Concurrency

Considerations before beginning

Concurrency | Real Microsoft expertise. Real business value.™

A bad query is always worth tuning

Deployment model

- Service Management – classic (old)
- Resource Manager
  o Deploy, manage, monitor all related services together
  o Consistent deployment – for example, Dev to QA and QA to Prod
  o Reference: Resource Manager Overview
    https://azure.microsoft.com/en-us/documentation/articles/resource-group-overview/
- Reference: Understanding Resource Manager deployment and classic deployment https://azure.microsoft.com/en-us/documentation/articles/resource-manager-deployment-model/

Concurrency | Real Microsoft expertise. Real business value.™

Region

- Are the services you want available in the region you want?
- Reference: Services by region https://azure.microsoft.com/en-us/regions/#services

Concurrency | Real Microsoft expertise. Real business value.™
VM size

- Understand what you need for your workload
- Minimums for SQL Server
  o Standard - DS2
    - 2 cores
    - 7 GB RAM
    - 4 disks @ 6400 max IOPS
  o Enterprise - DS3
    - 4 cores
    - 14 GB RAM
    - 8 disks @ 12,800 max IOPS
- Reference: Sizes for virtual machines: https://azure.microsoft.com/en-us/documentation/articles/virtual-machines-size-specs/
- Reference: Virtual Machines Pricing: https://azure.microsoft.com/en-us/pricing/details/virtual-machines/

Concurrency | Real Microsoft expertise. Real business value.™

Storage

- VM size determines max number & speed of disks, regular vs premium storage
- Starts with C: and D:
  - D: is temporary and Microsoft warns to never store anything you want to keep on it!
- You can and should add more disks and stripe them – we'll talk about that later
  - When you do that, you're paying for additional storage

Concurrency | Real Microsoft expertise. Real business value.™

Workflow

Concurrency | Real Microsoft expertise. Real business value.™

BYOL
Bring Your Own Licensing

Concurrency | Real Microsoft expertise. Real business value.™

Build the VM

- Reference: Performance best practices for SQL Server in Azure Virtual Machines https://azure.microsoft.com/en-us/documentation/articles/virtual-machines-sql-server-performance-best-practices/
  - VM size
  - Storage
  - Disks
  - I/O
  - Back up to blob storage

Concurrency | Real Microsoft expertise. Real business value.™

You will have to enter

- VM Name
- Size
- Storage account
- Virtual Network

Concurrency | Real Microsoft expertise. Real business value.™

Demo – Resource Group

Concurrency | Real Microsoft expertise. Real business value.™

Demo – Virtual Machine

Concurrency | Real Microsoft expertise. Real business value.™

PowerShell

- Open New-AzureRmVM.ps1
- Resource: Create and configure a Windows Virtual Machine with Resource Manager and Azure PowerShell https://azure.microsoft.com/en-us/documentation/articles/virtual-machines-ps-create-preconfigure-windows-resource-manager-vms/

Concurrency | Real Microsoft expertise. Real business value.™

Prep Windows

- Check power setting
- Enable Perform volume maintenance tasks, Lock pages in memory (maybe!)
- Join to domain

Concurrency | Real Microsoft expertise. Real business value.™

Create and attach storage

- Attach from Portal or PowerShell
- Stripe or pool in File & Storage Systems
- Add in Disk Management

Concurrency | Real Microsoft expertise. Real business value.™

Install SQL Server

- Mount media, follow your normal checklist
  - You have a setup checklist, right?!
- You choose what features and services are installed
- You control service accounts
- You can specify data directories

Concurrency | Real Microsoft expertise. Real business value.™

Images

Concurrency | Real Microsoft expertise. Real business value.™

Build the VM

- Follow the same best practices

Concurrency | Real Microsoft expertise. Real business value.™

You will have to select

- Name
- Size
- Storage Account
- Virtual Network
- Connectivity
- Port
- Authentication mode
- Auto patching
- Auto backups

Concurrency | Real Microsoft expertise. Real business value.™

Demo

Concurrency | Real Microsoft expertise. Real business value.™

PowerShell

- Same script, different image

Windows and SQL Server are installed

- SQL Server features installed
  o ALL of the features
- Service account used
  o Change this, restart service
- Data directories
  o What if you wanted something different?

Prep Windows

- Check power setting
- Enable Perform volume maintenance tasks, Lock pages in memory (maybe!)
- Join to domain

Comparing storage using diskspd

- BYOL – I added two SSD and mirrored

```
Total IO
thread |      bytes    |   I/Os  |   MB/s   | I/O per s | AvgLat | LatStdDev |  file
------------------------------------------------------------------------------------------------
     0 |    55855056   |   6818  |  26.61   |  3406.65  |  1.172 |    4.202  | d:\diskspd\io.dat (20GB)
     1 |    98484224   |  12022  |  46.93   |  6006.86  |  0.665 |    3.216  | d:\diskspd\io.dat (20GB)
     2 |    59940864   |   7317  |  28.56   |  3655.98  |  1.092 |    4.075  | d:\diskspd\io.dat (20GB)
     3 |    56385536   |   6883  |  26.87   |  3439.13  |  1.162 |    4.194  | d:\diskspd\io.dat (20GB)
------------------------------------------------------------------------------------------------
total:    270663680   |  33040  | 128.97   | 16508.61  |  0.968 |    3.847
```

- Image – I selected IOPS and let Azure handle set-up

```
Total IO
thread |      bytes    |   I/Os  |   MB/s   | I/O per s | AvgLat | LatStdDev |  file
------------------------------------------------------------------------------------------------
     0 |    57376768   |   7004  |  27.32   |  3497.04  |  1.143 |    4.077  | d:\diskspd\io.dat (20GB)
     1 |    95055392   |  11601  |  45.25   |  5792.29  |  0.690 |    3.196  | d:\diskspd\io.dat (20GB)
     2 |    57196544   |   6982  |  27.23   |  3486.06  |  1.147 |    4.043  | d:\diskspd\io.dat (20GB)
     3 |    59023360   |   7205  |  28.10   |  3597.40  |  1.112 |    3.998  | d:\diskspd\io.dat (20GB)
------------------------------------------------------------------------------------------------
total:    268652064   |  32792  | 127.91   | 16372.80  |  0.977 |    3.768
```

Concurrency | Real Microsoft expertise. Real business value.™

Both

Concurrency | Real Microsoft expertise. Real business value.™

Build servers frequently?

- Configure Azure Resource Manager Templates
  - Use JSON

Concurrency | Real Microsoft expertise. Real business value.™

9

Configure SQL Server

- Use your checklist!
- Mine includes:
  - Configure tempdb & model
  - Set MAXDOP & cost threshold for parallelism
  - Configure max & min memory
  - Add startup trace flags
  - Configure Database Mail
  - Set up Alerts for important errors
  - Set up and schedule maintenance

Concurrency | Real Microsoft expertise. Real business value.™

Yes, you still need to do maintenance!

- Backups
  - BYOL
    - Recommend backup to Azure blob storage
  - SQL Server Images does allow you to set auto-backups
    - Uses SQL Server Managed Backup in the background
    - Backs up to Azure blob storage
- CHECKDB
- Indexes/Statistics

Concurrency | Real Microsoft expertise. Real business value.™

Tools for maintenance

- Maintenance Plans
- T-SQL scripts
- 3rd party tools

Concurrency | Real Microsoft expertise. Real business value.™

Connectivity

- Connect applications to the new server
  - In the same vnet? Specify server name and integrated security in the connection string.
  - Over the internet?
    - Open TCP ports in Windows Firewall
    - Configure SQL Server to listen on TCP
    - Configure mixed mode authentication
    - Configure a Network Security Group inbound rule for port 1433
    - Configure DNS name
    - Verity connectivity
- Resource: Connect to a SQL Server Virtual Machine on Azure (Resource Manager) https://azure.microsoft.com/en-us/documentation/articles/virtual-machines-sql-server-connectivity-resource-manager/

Concurrency | Real Microsoft expertise. Real business value.™

Set up HA/DR

- Azure options like Availability Sets protect the Windows VM and storage
- No HA or DR for your databases!

Concurrency | Real Microsoft expertise. Real business value.™

HA/DR options

HA	Azure VMs – same region
Availability Groups	Yes
Database Mirroring	Yes
Failover Cluster Instances	Yes – with caveats

DR	Hybrid – On-prem to Azure	Azure VMs – same region	Azure VMs – span regions
Availability Groups	Yes	Yes	Yes
Database Mirroring	Yes	Yes	Yes
Backup/restore	Yes	Yes	Yes
Log shipping	Yes	Yes	Yes

Concurrency | Real Microsoft expertise. Real business value.™

Availability Groups

- All servers in the AG have to be in the same resource group
- You have to create a WSFC and set a static IP address
- In order to have a listener, you have to create an Internal Load Balancer to create a load-balanced endpoint
- Resource: 3 Keys to Configuring Azure Virtual Machines for Use in SQL Server Availability Groups http://www.concurrency.com/blog/w/3-keys-to-configuring-azure-virtual-machines-for-u

Concurrency | Real Microsoft expertise. Real business value.™

Failover Cluster Instances

- Azure doesn't support shared storage
- Option 1: use SIOS DataKeeper, a 3rd party utility
  - Uses synchronous data replication between two storage volumes
- Option 2: remote iSCSI Target shared block storage via ExpressRoute

Concurrency | Real Microsoft expertise. Real business value.™

Moving data into the database

- No easy button
- Back up and restore a database
- Create an SSIS package to move the schema and/or data
- Export and import a Data-tier Application (DACPAC)

Concurrency | Real Microsoft expertise. Real business value.™

Changing VM size

FAQ

- Can I upgrade or downgrade?
  - o Yes!
- Is it an online operation?
  - o Yes!
- How long does it take?
  - o It depends
- How?
  - o Portal
  - o PowerShell

PowerShell

- Open Change Azure vm size.ps1

Stopping the VM

Concurrency | Real Microsoft expertise. Real business value.™

When do you get charged?

- "If the status says "Stopped (Deallocated)," you're not being billed. If it says "Stopped Allocated," you're still being billed for allocated virtual cores (not the software license itself)."
- "To ensure you're not being billed, always stop virtual machines from the management portal. You can also stop the VM through Powershell by calling ShutdownRoleOperation with "PostShutdownAction" equal to "StoppedDeallocated".
If you shut down a VM from inside (using Windows power options) or through PowerShell by calling ShutdownRoleOperation with "PostShutdownAction" equal to "Stopped"."

- https://azure.microsoft.com/en-us/pricing/details/virtual-machines/

Concurrency | Real Microsoft expertise. Real business value.™

BYOL or Image?

- Which will be more cost-effective?
  o This is a question I can't answer!
- How much control do you want over SQL Server setup?
  o Hint: PowerShell helps a lot!

Concurrency | Real Microsoft expertise. Real business value.™

Demo – delete Resource Group

Concurrency | Real Microsoft expertise. Real business value.™
